

Meets Class I
UNIFORM BUILDING CODE

FLAMORT LATEX FIRE RETARDANT is an intumescent coating combining fire protection and excellent coating quality. The paint is applied by brushing, rolling or spraying to interior surfaces drying to a flat finish. For public buildings, schools, hospitals, nursing homes, hotels, motels, farms, churches, ships and industry.

Surface Preparation: Surfaces to be painted should be clean, free of grease and oil. Wire brush to remove old non-adhering paint. Use Latex-undercoat on porous surfaces.

Application: Stir thoroughly. Apply Flamort Fire Retardant Paint by sprayer, roller or brush. Two coats of Flame Retardant Paint is applied at specified rate allowing at least 4 hours in between coats.
Do not apply in temperatures below 50 deg. F.

Thinning: Apply at package consistency. If thinning is necessary, use small amount of tap water. Use water for cleaning equipment.

Coverage: As specified.

Tinting: Hundreds of attractive shades can be obtained by tinting with machine colorants. (Cal-Ink or All Phase)
